Crystalline fructose is a processed sweetener derived from corn that is almost entirely fructose. It can also be made from sucrose by splitting the fructose and glucose molecules. Crystalline fructose consists of at least 98% pure fructose, any remainder being water and trace minerals. It is used as a sweetener in the likes of beverages and yogurts, where it substitutes for high-fructose corn syrup and table sugar. Crystalline fructose is estimated to be about 20 percent sweeter than table sugar, and 5% sweeter than HFCS. The crystalline fructose industry is a quite concentrated market with a few companies dominates the market. Tate & Lyle is the dominate producer of crystalline fructose, the production was 118.9 K MT in 2015, accounting for about 31.71% of the total amount, followed by ADM, with the production market share of 21.34%. The top four companies occupied about 75.94% production share of the market in 2015.
