The global Cubic Boron Nitride market was valued at 3846.53 Million USD in 2021 and will grow with a CAGR of 10.72% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cubic Boron Nitride (CBN) is a synthetic chemical compound made up of boron and nitrogen atoms in a one-to-one ratio. Unlike other types of boron nitride, it exists as a cubic crystal lattice, with its atoms arranged in a symmetrical, cube-shaped structure like the crystalline structure of diamond. Its material properties include extreme hardness, stability under heat, and superior chemical resistance. Cubic Boron Nitride is the second-hardest known material after diamond, making it useful in a wide variety of industrial applications, where it is often used as an abrasive or cutting tool. As diamond is less stable than graphite, Cubic Boron Nitride is less stable than h-BN, but the conversion rate between those forms is negligible at room temperature (again like diamond). The cubic form has the sphalerite crystal structure, the same as that of diamond, and is also called β -BN or c-BN. The wurtzite BN form has the same structure as lonsdaleite, a rare hexagonal polymorph of carbon. In both c-BN and w-BN, the boron and nitrogen atoms are grouped into tetrahedra, but the angles between neighboring tetrahedra differ between the two. Now, China CBN production is the first in the world. However, the quality of the Cubic Boron Nitride products is not high. Chinese main products are low grade and medium grade. The price is relatively low. In the

United States, Europe, Japan, Cubic Boron Nitride product has a complete crystal, high strength, good thermal stability. Product prices are high in these areas, and profit is relatively high.
