The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Curing Bladder market, curing bladder is used in the process of manufacturing tyres. Curing is the process of applying pressure to the green tire in a mold in order to give it its final shape, and applying heat energy to stimulate the chemical reaction between the rubber compounds and other materials. In this process the green tire is automatically transferred onto the lower mold bead seat, a rubber bladder is inserted into the green tire, and the mold closes while the bladder inflates. As the mold closes and is locked the bladder pressure increases so as to make the green tire flow into the mold, taking on the tread pattern and sidewall lettering engraved into the mold. The bladder is filled with a recirculating heat transfer medium, such as steam, hot water, or inert gas. At the end of cure the pressure is bled down, the mold opened, and the tire stripped out of the mold. The Automobile market will remain the largest outlet for tire demand, accounting for 62% of the total in 2017. Demand for Curing Bladder in this market will rise 6.24 percent per year to 6.8 million units. Growth in demand for light vehicle Curing Bladder will be driven by the expansion of the middle class in industrializing countries, which will contribute to increased vehicle ownership. Gains in sales of medium and heavy vehicle Curing Bladder will be fueled by increased

commercial trucking activity.
