Cyanuric acid or 1,3,5-triazine-2,4,6-triol is a chemical compound with the formula (CNOH)₃. Like many industrially useful chemicals, this triazine has many synonyms. This white, odorless solid finds use as a precursor or a component of bleaches, disinfectants, and herbicides. World of Cyanuric Acid production presents four characteristics: one is less production countries and regions, and regional development imbalance, China, the United States, Germany, Japan and China's Taiwan region total production capacity of more than 85% of the world's total production capacity. The second is capacity more concentrated, and the world more than 75% of capacity is concentrated in China. In recent years, preparation Cyanuric Acid with chemical split method is developing very rapidly, and has been used in industrial production. Asian is the major production region to produce Cyanuric Acid. What's more, the price of raw material continues to decline as the price of global oil decline, result of the low price of Cyanuric Acid. CYANURIC ACID is an important intermediate, which has a widely used in the Fine Chemical industry. According to statistics, Fine Chemical is the major application filed, which was estimated to account for 75% in 2016.
