Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cyclic olefin copolymers (COCs) are formed by chain copolymerization of cyclic monomers with ethene. COCs exhibit remarkable optical properties, which are similar to that of glass. These materials can resist high temperature and offer excellent transparency with low bi- refractivity. The monomer content in the COC affects its properties such as stiffness, viscosity, and glass transition temperature.
