Dairy proteins are isolated from skim milk using milk protein concentrates and membrane filtration. Dairy protein milk fractions are enriched in bound calcium and comprise both casein and whey protein in the same ratio as milk. Dairy proteins are used as ingredients for manufacturing products such as yogurt and cheese, dietetic formulations, ice cream, energy bars and cereal, desserts, infant formulae toppings, low-fat spreads, baked goods, geriatric nutritional products, and sports beverages & foods. Factors such as potential health benefits of dairy nutritional and nutraceutical ingredients, high demand for milk-based ingredients in skin and hair care cosmetics, and easy availability of caseins and caseinate is driving the global dairy nutritional and nutraceutical market. Moreover, demand for dairy nutrition and nutraceutical ingredients from the food processing sector is developing steadily and can be attributed to the several health benefits related with dairy nutritional and nutraceutical ingredients consumption. Health benefits such as lower risk of cardiovascular disease, lower cholesterol levels, improved digestive health, and healthy bone growth are increasing the popularity of dairy nutritional and nutraceutical ingredients. Developing consumer inclination towards a healthy lifestyle is further boosting the growth of the global dairy
