Distillers grains are a cereal byproduct of the distillation process. Brewer's spent grain usually refers to barley produced as a byproduct of brewing, while distillers grains are a mix of corn, rice and other grains. There are two main sources of these grains. The traditional sources were from brewers. More recently, ethanol biofuel plants are a growing source. It is created in distilleries by drying mash, and is subsequently sold for a variety of purposes, usually as fodder for livestock (especially ruminants). Corn-based distillers grains from the ethanol industry are commonly sold as a high protein livestock feed that increases efficiency and lowers the risk of subacute acidosis in beef cattle. Recently, studies indicate that dried distillers grains with solubles (DDGS) as a food source for human consumption may have some benefit in reducing heart disease risk. USA is in the dominating position of global DDGS market, with a market share of over 50% in 2019. The next two regions are China and Europe, which accounted for about 13% and 9% of global market. DDGS are widely used in the feed of various kinds of animals, such as ruminant, swine and poultry. The largest segment is Ruminant Feed, which occupied nearly 75% of the global market in 2019. Swine Feed and Poultry Feed took up about 12% and 6% of market share, respectively.
