Deep hyperthermia device is a kind of medical device that use microwave or ultrasonic to make the tissue where in the deep of the body is exposed to slightly higher temperatures to damage and kill cancer cells or to make cancer cells more sensitive to the effects of radiation and certain anti-cancer drugs. General treatment depth is always 2 cm or more. Due to its therapeutic effect, but small bad impact on human health, it is being widely used in the medical industry. Hyperthermia therapy can combine with radiation therapy, called thermoradiotherapy, its very useful for the treat of cancer and other diseases. Deep hyperthermia device is a kind of medical device, can be used in the patients who suffering from chronic prostatitis, medical diseases, surgical diseases, gynecological diseases, neurological diseases, oncologic diseases and so on. Usage of deep hyperthermia device does not cause any other side effects, especially for the treat of oncologic diseases. It can be used to treat tumour coordinate with radiotherapy, even replace radiotherapy partly. So deep hyperthermia device is a kind of great market potential medical device in the future.
