The global Defense Robotics market was valued at 1713.91 Million USD in 2021 and will grow with a CAGR of 7.81% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Most of the countries utilize the defense robotic system or are in the process of acquiring or building the technology to incorporate into military programs. These robots are used in form of unmanned aerial vehicles (UAVs), unmanned group vehicles (UGVs) and unmanned underwater vehicles (UUVs). Unmanned group vehicles are robots that move on wheels or tracks and perform the function of sentry duties and examine the potential hostile location. Unmanned aerial vehicles are essentially remotely controlled or automated robots. The use of all these robotic system includes same purpose of replacing or supplementing human in battlefield situations. Deployment of autonomous or semi autonomous robotic system in the battle field helps in improving the military efficiency, operational performance and accuracy. North America is the most technological advanced region in defense robotic system and Asia Pacific represents a strong opportunity due to the availability of technology in countries including China, Japan and India.
