The global Defoamers market was valued at 6026.94 Million USD in 2021 and will grow with a CAGR of 3.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A foam is a substance that is formed by trapping pockets of gas in a liquid or solid. A bath sponge and the head on a glass of beer are examples of foams. Antifoams are an effective remedy. A defoamer or an antifoaming agent is a chemical additive that reduces and hinders the formation of foam in industrial process liquids. Commonly used agents are insoluble oils, polydimethylsiloxanes and other silicones, certain alcohols, stearates and glycols. The additive is used to prevent formation of foam or is added to break a foam already formed. The pulp & paper application dominated the defoamer market during the forecast period, closely followed by paints & coatings in 2017. Paints & coatings application is also expected to witness high growth rate between 2017 and 2023 due to the growing paints & coatings industry in North America, Europe, and Asia-Pacific, as a result increasing the demand for defoamer in the respective regions. The growing manufacturing industry in the U.S., the Middle East, and Asia-Pacific countries such as China, Japan, and India is also driving the market.
