A dehumidifier is an electric appliance that reduces the level of humidity in the air. It is used mostly in regions with elevated temperatures and high humidity levels. The increasing demand for electricity as one of the primary growth factors for the dehumidifier market. Power plants contain expensive equipment that are highly susceptible to corrosion when they work in normal atmospheric conditions. Dehumidifiers are installed to reduce the moisture level in power plants to prevent rusting and corrosion of equipment such as turbines, power generators, boilers, and condensers. Rapid urbanization and Industryization is influencing the demand for electricity, consequently, inducing the construction of new power plants. This rising number of power plants will contribute to the demand for dehumidifiers.
