The global Demand Response (DR) market was valued at 2049.6 Million USD in 2021 and will grow with a CAGR of 25.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Demand response (DR) is defined as the change in power consumption by a utility's customers to reduce the gap between demand and supply of electricity. DR solutions help capture the benefits of time-based rates or financial incentives by consumers. This is done by reducing or shifting their electricity consumption during the peak hours of demand. DR further helps electricity providers to decrease costs by reducing the peak demand and prevents power companies from investing in new plants to meet the excess energy demand. Thus, the power and energy industries consider DR programs as an extremely valuable resource whose capabilities are expanded by grid modernization efforts. The emergence of data-driven demand response will be one of the major trends that will gain traction in the DR market during the next few years. With the help of high-end data analytics software, the manufacturers in this marketplace are offering personalized DR services. The high-end analytics software makes personalized services easy and flexible for the aggregators. The aggregators can build a virtual model for energy usage and use the model as a forecasting tool after analyzing the customer's past trend of electricity utilization, which will ensure low energy costs.
