### Abstracts

The global Demulsifier market was valued at 1742 Million USD in 2021 and will grow with a CAGR of 2.02% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Demulsifiers, or emulsion breakers, are a class of specialty chemicals used to separate emulsions, for example, water in oil. They are commonly used in the processing of crude oil, which is typically produced along with significant quantities of saline water. This water (and salt) must be removed from the crude oil prior to refining. If the majority of the water and salt are not removed, significant corrosion problems can occur in the refining process. Based on type, the oil soluble segment is estimated to lead the demulsifier market during the forecast period. The high share of the oil soluble segment, in terms of value, can be attributed to the increasing demand for this type of demulsifier in emulsion breaking.
