The global Dental Radiology Equipment market was valued at 2532.56 Million USD in 2021 and will grow with a CAGR of 8.8% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

With advancements in medical imaging technologies, the demand for radiology systems in the field of dental healthcare will continue to witness an upsurge. These equipment (products) include extraoral x-ray systems, intraoral x-ray systems, cone-beam computed tomography imaging, and intraoral plate scanners. Being developed on one of the most breakthrough technology in medical imaging, CBCT equipment have emerged as a key tool for dentists around the world. Both, extraoral and intraoral x-ray systems are being utilized for generating two-dimensional images of dental structures. However, these dental radiology equipment were unable to detect the abnormalities on the third-dimensional surfaces of teeth and mouth. CBCT imaging equipment have stepped in as a relatively new medical imaging technique that offers 3D images. One of the key advantage of CBCT imaging equipment is their ability to generate accurate 3D images at low cost, compared to the conventional computed tomography. The images procured from CBCT imaging equipment have the potential to bring higher efficiency in oral and maxillofacial surgeries. Made of feasibly-procurable materials, such dental radiology equipment are anticipated to witness a steady demand in the global market throughout the forecast period.
