### Abstracts

The global Dental Syringes market was valued at 6344.98 Million USD in 2021 and will grow with a CAGR of 3.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Based on type, the market is segmented into two segments, namely, aspirating syringes, and non-aspirating syringes. The aspirating syringes segment is expected to dominate the market during the forecast period. The prominent market position of the aspirating syringes segment can be primarily attributed to the procedural benefits offered by aspirating syringes over conventional syringes (such as easy syringe handling, minimal operational stress, and better operational control), and longer shelf life of metallic syringes (as compared to conventional plastic syringes). On the basis of material, the market is segmented into metallic and plastic-based dental syringes. Metallic syringes are expected to dominate the market during the study period owing to their advantages (such as long shelf life, reusability, and nonreactive nature) and significant adoption of metallic syringes among dentists.
