Abstracts

The global Depyrogenation Tunnels market was valued at 4.23 Million USD in 2021 and will grow with a CAGR of 1.18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Depyrogenation tunnels are used in pharmaceutical filling lines to sterilize glass containers before they are aseptically filled. These tunnels use unidirectional hot air at temperatures up to 600° F (350° C) and can be used to sterilize and depyrogenate glass vials, ampoules, and cartridges. In the next five years, the global production of depyrogenation tunnels will maintain a 3%-6% annual growth rate, production is expected to exceed 3400 units in 2020, the average operating rate will remain at 70% to 90%. Although sales of depyrogenation tunnels brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the depyrogenation tunnels field hastily.
