The global Dermatology Diagnostic Device market was valued at 819.62 Million USD in 2021 and will grow with a CAGR of 6.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dermatoscope is a surface microscope used to examine the skin lesion in dermatoscopy. Dermatoscopy requires a powerful lighting system and high quality magnifying lens, to examine the skin structure and patterns. Dermatoscope is mainly used to assess pigmented skin lesion, skin tumor, scabies, fungal infection, and hair loss; and for locating a splinter, examining nail fold capillaries in cutaneous lupus erythematosus or systemic sclerosis, and detection of melanoma. It is also used to distinguish certain skin conditions, such as lichen planus, from others such as psoriasis and eczema. Rising incidences of skin disorders (such as pigmentation, psoriasis, vascular lesion, and several tanning issues), increasing prevalence of skin cancer, growing demand for dermatologists, rise in geriatric population, increasing awareness about non-invasive aesthetic procedures, technological advancements in dermatology diagnostic devices as well as in the field of medical science, increase in health care awareness, and rise in health care expenditure are some of the key factors driving the growth of the global dermatology diagnostic device market. However, poor dermatology care, strict regulatory requirements for medical devices, reimbursement issues, competitive pricing of low-cost manufacturers, and availability of low cost substitutes act

as major restraints for the growth of the global dermatology diagnostic device market.
