The global Desiccant Dehumidifier market was valued at 593.09 Million USD in 2021 and will grow with a CAGR of 5.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A desiccant dehumidifier operates on a totally different principle to a refrigerant type. The main benefit of a desiccant dehumidifier is that it performs exceptionally well when used in cooler climates, or when a low dew point is required. As there is no actual water produced during the process, these units can work effectively at sub-zero temperatures. In the coming years there is an increasing demand for desiccant dehumidifiers in the regions of North America and Europe that is expected to drive the market for more advanced desiccant dehumidifiers. Increasing of industrial fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of desiccant dehumidifiers in developing countries will drive growth in global market.
