Abstracts

The global Di-Isononyl Phthalate (DINP) market was valued at 224.1 Million USD in 2021 and will grow with a CAGR of 2.94% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the di-isononyl phthalate (DINP) market. Diisononyl phthalate (DINP) is a phthalate ester primarily used as a general purpose plasticizer. Plasticizers increase the softness and flexibility of polymeric materials. Over 95% of the DINP produced is used to improve the flexibility, pliability and elasticity of a variety of polyvinyl chloride (PVC) products. Di-Isononyl Phthalate (DINP) is a major substitute for Di (2-ethylhexyl) phthalate (DOP) in most flexible PVC applications. Price difference between those two products is little. DINP is mainly used as plasticizer for PVC industry. In 2017, PVC plasticizer consumed about 1382 MT DINP. Global major production regions are China, North America and Europe. Europe is the largest production region, as also the largest consumption region. In 2017, Europe produced 515 K MT and consumed 542 K MT. In China, there were many suppliers. While limited by raw material resource, most company had stopped production. As manufacturing unit of DOP and DINP can be sharing, most DOP manufacturers can also produce DINP when customer need.
