The global Diamond Wire market was valued at 1296.44 Million USD in 2021 and will grow with a CAGR of 36.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Diamond wire cutting (DWC) is the process of using wire of various diameters and lengths, impregnated with diamond dust of various sizes to cut through materials. Because of the hardness of diamonds, this cutting technique can cut through almost any material that is softer than the diamond abrasive. A 'diamond wire' is a tool used to thinly slice rectangular silicon ingots that are pre-cut to the dimensions of each wafer. It is a threadlike slicing tool made with a thin piano wire with diamond granules firmly attached and is thinner than a human hair. Under the background of slower economy growth rate, companies face high risks of profit decline. Currently, China's electroplated diamond wire industry maintains a rapid growth, and electroplated diamond wire market in Europe, USA and Japan has a certain potential. The demand in these areas is relatively stable.
