Diaphragm Valves (or membrane valves) consists of a valve body with two or more ports, a diaphragm, and a seat upon which the diaphragm closes the valve. The valve is constructed from either plastic or metal. Diaphragm Valves can be manual or automatic. Their application is generally as shut-off valves in process systems within the industrial, food and beverage, pharmaceutical and biotech industries. Europe in the coming years will continue to be the largest production region of the Diaphragm Valve with an annual output value of 187.24 Million US dollars in 2015. Europe is also the largest consumption market, followed by North America, and some developing countries can not be ignored in the consumption market.
