The global Diaphragm Valves market was valued at 360.04 Million USD in 2021 and will grow with a CAGR of 1.79% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Diaphragm valves are devices that are used to regulate and control the flow of fluids in an Industry facility. Valves operate by opening, closing, or partially blocking the passage ways that allow the movement of fluids from high pressure to low pressure or vice-versa. Valves are used in several discrete and process industries for the transportation of fluids between two points within an enclosed system. The growing demand from radioactive waste management industry is one of the key factors that will drive the market's growth during the estimated period. The demand for electricity is increasing due to the rapid Industryization and growth in population. The increasing demand for electricity will boost the installation of nuclear plants, which is considered as the second-highest source of power generation. Diaphragm valves are used in several processes in these plants to dispose of the radioactive wastes safely. Low-level wastes, intermediate-level wastes, and high-level wastes are the three types of radioactive wastes, which are safely disposed of by using diaphragm valves.
