The global Dicyclopentadiene market was valued at 907.38 Million USD in 2021 and will grow with a CAGR of .47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dicyclopentadiene (DCPD) is a chemical compound which is a dimer of cyclopentadiene (CPD). Dicyclopentadiene products are obtained during the cracking process of high petroleum fractions. It is majorly used in the manufacturing of resins. DCPD is increasingly used in manufacturing poly-DCPD, that is used in manufacturing truck body, buses, tractors, and big containers. As the automotive industry is in high demand in APAC, the poly-DCPD market will witness high growth. Also, the presence of many manufacturers and their capacity expansion will also boost the growth in the DCPD market in APAC. The rising demand for bio-based EPDM is one of the key trends that will contribute to the market growth in the forthcoming years. The eco-friendly nature of the bio-based EPDM as it lowers greenhouse gas emission with lesser carbon footprint drives its popularity. The bio-based EPDM will witness stable growth in the coming years with the development of new grades and new applications. This will drive the growth of the DCPD market in the future.
