The global Dietary Fibers market was valued at 3864.25 Million USD in 2021 and will grow with a CAGR of 6.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dietary fiber consists of non-starch polysaccharides and other plant components such as cellulose, resistant starch, resistant dextrins, inulin, lignins, chitins, pectins, beta-glucans, and oligosaccharides. On the basis of type, the dietary fibers market was led by soluble dietary fibers in 2017. Inulin is one of the most largely commercially available types of soluble dietary fibers. North American countries are expected to become major markets owing to the high awareness among customers; this contributes to the growth of the global dietary fibers market in the near future.
