Abstracts

The global Differential Scanning Calorimeter (DSC) market was valued at 67.96 Million USD in 2021 and will grow with a CAGR of 3.98% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Differential Scanning Calorimetry, or DSC, is a thermal analysis technique that looks at how a material's heat capacity (C_p) is changed by temperature. A sample of known mass is heated or cooled and the changes in its heat capacity are tracked as changes in the heat flow. The differential scanning calorimeter (DSC) is a fundamental tool in thermal analysis. It can be used in many industries, including pharmaceuticals, polymers, food, paper, printing, manufacturing, agriculture, semiconductors, and electronics. Differential scanning calorimeter has developed for half a century. Technologically, it's very mature. High temperature differential scanning calorimeter of Netzsch is outstanding; however, PerkinElmer is good at low temperature differential scanning calorimeter. The vast majority of differential scanning calorimeters on the market keep heat flux constant. Only PerkinElmer's DSC 8500/8000 keeps power supply constant. We can't deny it, they sale 52 Units to University, institute and contract lab in 2015. But the market share is less and less. Malvern's differential scanning calorimeter is specializes in life sciences and drug discovery for the study of the stability of proteins and other biological molecules. It holds 85% micro differential scanning calorimeter market share in 2015.
