## Abstracts

The global Digital PCR (dPCR) market was valued at 2173.99 Million USD in 2021 and will grow with a CAGR of 10.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Digital PCR (Digital PCR-dPCR) technology is a new method for nucleic acid detection and quantification. Unlike traditional quantitative PCR (qPCR) technology, digital PCR uses absolute quantification and does not rely on standard curves and reference samples to directly detect targets The copy number of the sequence. Because this detection method has better sensitivity, specificity and accuracy than traditional qPCR, dPCR has been widely used quickly. This technology is used in the detection of very small amounts of nucleic acid samples, detection of rare mutations in complex backgrounds and identification of small differences in expression levels. The realized advantages have been widely recognized, and its many advantages in gene expression research, microRNA research, genome copy number identification, rare mutation detection of cancer markers, identification of pathogenic microorganisms, identification of transgenic components, accurate quantification of NGS sequencing libraries, and result verification, etc. The broad application prospects it has already received more and more attention. During the forecast period, the Asia-Pacific region (including China, India, Japan and other regions in the Asia-Pacific region) will develop at a faster growth rate. As global life sciences companies have increased their focus on this region, and

this booming development has increased awareness about the diagnosis and treatment of genetic-based diseases, more and more public and private funds are supporting the development of new dPCR technology, Indian Genome. The academic market is rising, and factors such as the continued strengthening of Japanese cancer research have contributed to the rapid development of the Asia-Pacific market. Due to the significant growth opportunities offered by emerging countries, some related companies have begun to focus on expanding their product distribution networks in these emerging markets.
