## Abstracts

The global Digital Polymerase Chain Reaction (dPCR) market was valued at 1863.64 Million USD in 2021 and will grow with a CAGR of 4.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Digital PCR is a highly precise approach to sensitive nucleic acid detection and quantification. Each sample is partitioned into thousands of individual reactions (droplets for Droplet Digital PCR technology). Each partition is analyzed after end-point PCR cycling for the presence or absence of a fluorescent signal, and the absolute number of molecules present in the sample is calculated. dPCR does not require a standard curve for quantification. On the basis of technology, the dPCR Instrument market is categorized into chip-based technology and Droplet Digital PCR (ddPCR system). The chip-based technology segment is expected to account for the larger share of the global dPCR market in 2018; which is also expected to grow at the higher growth rate during the forecast period. Factors such as ongoing technological developments in dPCR, continued expansion in distribution networks of emerging dPCR product manufacturers in global markets, and growing private funding to develop and commercialize innovative dPCR instruments are contributing to the growth of the dPCR market.
