## Abstracts

The global Digital Potentiometer market was valued at 205.51 Million USD in 2021 and will grow with a CAGR of 4.32% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Digital Potentiometer market is growing due to the increasing digitization and new technologies supported by digital potentiometer. The digital potentiometer or digiPOT are less exposed to vibration and physical tampering which increases demand for digital potentiometer among the users. These digital potentiometer can be used in place of mechanical potentiometer for various purposes such as sensor trimming, calibration, audio level control for matching line impedances. Digital potentiometer can also be used to adjust level in automotive electronics and in programmable power supplies. The major factor driving the adoption of Digital Potentiometer is the environmental protection and its features such as higher resolution, greater stability, and reliability. Digital potentiometer are smaller than mechanical potentiometers and can fit in tiny IC packages measuring 2.9 mm x 2.8 mm (SOT-23-6) or smaller due to which it is easy to carry them.
