Abstracts

The global Digital Radiography Detectors market was valued at 163.63 Million USD in 2021 and will grow with a CAGR of 6.29% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The digital radiography detectors is an integral part of the x-ray system, used to convert x-ray photon energy into visible light. Dynamic, flat-panel, and solid-state x-ray detectors are widely used in fluoroscopy imaging across various medical applications. The dynamic x-ray detector is made of thin layers of x-ray absorptive materials, which are overlaid on the active matrix array. Europe is expected to mark substantial shares in the global digital radiography detectors market over the forecast period. The MEA digital radiography detectors market is expected to represent sluggish growth due to lack of awareness and reach of technology in most of the countries.
