Abstracts

The global Digital Valve Positioner market was valued at 131.87 Million USD in 2021 and will grow with a CAGR of 5.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

There are three types of positioners: Pneumatic positioners. These devices receives a pneumatic (air) signal from the controller and output a pneumatic signal to the actuator. Analog, or electro-pneumatic, positioners. Here, the input signal is electrical, rather than pneumatic. Digital, or smart, positioners. These positioners also receive an electrical signal, but it's digital as opposed to analog. The main reason digital positioners are popular is that they can do much more than just control the position of the valve. The newest positioners on the market can also collect data about the valve to automatically alert users about how the valve and its assembly are performing, and even aid in diagnostics and maintenance. Although Production of Digital Valve Positioner brought some opportunities, the study group recommends the new entrants who has not technical advantage and downstream support do not enter into the Digital Valve Positioner field. As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. What is more, the company in this industry should pay attention to their R&D, innovation and services, then they may get the competition advantage, and get a bigger market share.
