Digital X-Ray Systems is the electronic capture of an X-ray exposure. The exposure is captured in a device that converts the X-rays to a digital signal, which is then represented on a viewing monitor for diagnosis. An image from a Digital X-ray System that appears on a viewing monitor may have come from one of two technologies, namely Computed Radiography (CR) and Direct Digital Radiography (DR/DDR).Currently, there is still great market potential for digital x-ray system, as the penetration rate of digital x-ray system is still not that high, especially in developing countries such as China, India, Brazil and etc. But it is forecasted that the growth rate of digital x-ray system may not keep not fast in the following years, after the penetration rate of digital x-ray system get reasonable level; what can not be ignored is that conventional x-ray system will disappear, conventional x-ray system still has a lot of advantages. Despite the presence of competition problems, due to the increasing demand of leading-edge, effective products and the development of downstream industry area, investors are still optimistic about this area, investors are still optimistic about this area, the future will still have more new investment enter the field.
