Dimer Acid is straight chain unsaturated fatty acids, refers to the linoleic acid of natural oils as the main component, or a dimer by unsaturated fatty acid ester under the clay catalyst, through the Diels - Alder cycloaddition polycondensation. It is a mixture of isomers, which are mostly dimers, a small amount of trimer or polymer and trace the unreacted monomer. Dimer acid is a kind of important oil which is widely used in chemical in coating, surface active agent, lubricant, printing ink, hot melt adhesive industry. Increasing polyamide resins demand on account of high construction spending in Brazil, China, India and Mexico is expected to remain a key driving factor for global dimer acid market. Growing demand for oilfield chemicals on account of increasing drilling activities is also anticipated to have a positive influence on the market growth. Volatile price of key raw materials is expected to remain a key challenge for market participants.
