Dimethicone, also called Polydimethylsiloxane (PDMS), belongs to a group of polymeric organosilicon substances that are commonly referred to as silicones. Dimethicone is the most widely used silicon-based organic polymer, and is particularly known for its strange rheological (or flow) properties. It is optically clear, and, in general, is considered to be inert, non-toxic and non-flammable. Dimethicone has many applications due to its performance properties such as low viscosity variety to temperature change, excellent thermal stability, low surface tension and excellent dielectric properties, etc. It is mainly used for daily chemical, chemical additive and machinery, etc. In 2015, amount of dimethicone used in daily chemical took about 29.24%. Chemical additive application took about 43.19%. Machinery application took 8.75%.
