## Abstracts

The global DIN Rail Power Supply market was valued at 74.31 Million USD in 2021 and will grow with a CAGR of 3.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The DIN rail power supply is based upon a series of standards created by Deutsches Institut für Normung (DIN), which is a national standards organization in Germany. These power supplies are alternating current (AC) to direct current (DC) transformers in a variety of ranges. The end-user can obtain the required DC output power by using the various settings available in the power supply. These power supply units are easy to install and require less or no maintenance. With above said advantages of DIN rail power supplies, the downtime is kept at a minimum level without compromising the efficiency or the productivity of the plant. The DIN rail power supplies are mainly used in industry automation and control, light industrial, instrumentation, process control etc. It has started playing the role of an indispensable part in terms of power supply quality and reliability. As to the market volume, it is estimated that the global sales volume of DIN rail power supply was about 8.6 Million Units in 2017. Currently, Europe was the largest market of DIN rail power supply, with about 31% share of global total demand volume and about 40% revenue share. Germany is the largest market of DIN rail power supply in Europe. The DIN rail power supply is mainly used in IT, industry, renewable energy, oil & gas, semiconductor, medical. The application market share of industry is

more than 60%. Currently, a major challenge affecting the market growth is the high price of DIN rail power supplies. As large demand of power supply products at home and abroad, many companies began to enter the field. The competition is very fierce. The DIN rail power supply units are very easy to use and more importantly easy to replace when some problem does occur. Thus the downtime of productivity is greatly reduced. Despite the presence of competition problems, due to the awareness of end-users and their demand for high end products, investors are still optimistic about this area, the future will still have more new investment enter the field. In the next five years, the consumption volume will keep increasing, as well as the consumption value.
