Dissolving pulp is a type of chemical pulp that produced by put into chemical solution below 20 Celsius degrees and containing more than 92% (including 92%) of insoluble level points of alkaline pulp or sulfate wood pulp by weight, or containing more than 88% (including 88%) of insoluble level points of sulfite pulp, and ash content must not exceed 0.15% by weight. The cellulose content of this type of pulp is above 90%, it is high whiteness, highly uniform cellulose polymerization degree, has special properties and uses. Global giant manufactures mainly distributed in U.S., E.U., Canada and Africa, The manufacturers in U.S. have a long history and unshakable status in this field. Manufacturer such as Rayonier has relative higher level of product's quality. As to E.U., the production countries are very scattered. In Japan, NPI is the first attempt to manufacture dissolving pulp with the use of a kraft pulp continuous digester. Most of Chinese manufactures locate in Shandong, Hunan and Fujian province. The key consumption markets locate at underdeveloped countries. China sole take about a half of the global market share. We tend to believe this industry is in mature stage, and the consumption increasing rate will take a mild level.
