Abstracts

The global Distributed Antenna System (DAS) market was valued at 290.36 Million USD in 2021 and will grow with a CAGR of 11.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Distributed Antenna System (DAS) involves the use of several antennas as opposed to one antenna to provide wireless coverage to the same area but with reduced total power and additional reliability. Often times a DAS uses RF directional couplers and/or wireless amplifiers to split and amplify the wireless signal from the source out to the distributed antennas. In many cases a DAS will use a combination of low loss coaxial cabling as well as fiber optic cabling supporting radio over fiber (RoF) technology to distribute the wireless signals to the antennas. A Distributed Antenna System can be designed for use indoors or outdoors and can be used to provide wireless coverage to hotels, subways, airports, hospitals, businesses, roadway tunnels etc. The wireless services typically provided by a DAS include PCS, cellular, Wi-Fi, police, fire, and emergency services. Carrier ownership held the largest size of the distributed antenna system market in 2017. In carrier ownership, there is no capital expenditure investment for the facility owner; the carriers take full authority of distributed antenna system installation and ownership. Under the carrier ownership model, indoor coverage has significant potential to claim a good return on investment (ROI). Hence, the high ROI attained in carrier ownership models for indoor DAS (iDAS) makes it a preferable

ownership model.
