Abstracts

The global Distributed Antenna Systems (DAS) market was valued at 4251.63 Million USD in 2021 and will grow with a CAGR of 6.62% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Distributed Antenna System (DAS) involves the use of several antennas as opposed to one antenna to provide wireless coverage to the same area but with reduced total power and additional reliability. Wireless network performance is severely stressed by growing data usage and the dense penetration of always-connected smartphones and devices. As a result, providers have had to shift their focus from simply providing enough indoor coverage for voice calls to enabling wireless subscribers' growing demand for bandwidth-intensive data applications. DAS and small-cell deployments are clearly emerging as complementary solutions to the existing macro cellular networks. DAS networks have simply become an integral and critical component of today's integrated heterogeneous network architecture.
