The global Distributed Peristaltic Pump market was valued at 637.49 Million USD in 2021 and will grow with a CAGR of 3.89% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Distributed peristaltic pumps are positive displacement pumps which use rotating rollers pressed against special flexible tubing to create a pressurized flow. The tubing isolates the fluid from the rest of the pump and environment, eliminating contamination and making it ideal for handling aggressive, corrosive, or abrasive media. The roller mechanism also provides low shear pumping of the fluid for shear-sensitive fluids. The main enterprises in this industry are Watson-Marlow, VERDER, Cole-Parmer and so on. In 2018, Watson-Marlow had the highest income proportion, reaching 18.41%, followed by VERDER and Cole-Parmer, accounting for 12.71% and 8.48% respectively. From the regional perspective, North America and Europe are the most important, accounting for 28.18% and 32.28% respectively.
