The global District Heating and Cooling market was valued at 18120.43 Million USD in 2021 and will grow with a CAGR of 10.36% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

District energy, both heating and cooling, tie together the energy generating sources in a city with buildings and facilities having a need of heating and/or cooling. Instead of each building having its own heating or cooling system, the energy is delivered to several buildings in a larger area from a central plant. The water based distribution system guarantees that heat and cooling arrive safely to the end users. With district heating, energy is saved overall, as it takes advantage of resources that would otherwise not be have been used, making it an efficient and sustainable solution to satisfy the local heat and cooling demand in a city. The classification of district heating and cooling includes district heating and district cooling, and the proportion of district heating in 2019 is about 86%. District heating and cooling is widely used in residential, commercial and industrial. The most proportion of district heating and cooling is used in residential buildings, and the proportion in 2019 is about 39%.
