Dolomite is a naturally occurring double carbonate consisting of a structural arrangement of calcium carbonate  $\text{CaCO}_3$  and magnesium carbonate  $\text{MgCO}_3$ . The nodular particle shape of dolomite crystals has similarities to marble ones. Therefore, dolomite is often present together with marble. Its sedimentary origin had been subjected to high pressure and temperature (metamorphosis) during movements in the earth's crust. Dolomite is an essential mineral which is using in many industries. The principal uses of industrial dolomite, firstly as a refractory and later as a flux, have been linked with iron and steelmaking since the latter part of the 19th century.
