Abstracts

The global Doppler Ultrasound market was valued at 2738.26 Million USD in 2021 and will grow with a CAGR of 4.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Doppler ultrasound is a non-invasive test, which is used to evaluate the flow of blood through blood vessels by using high frequency of sound waves i.e. ultrasound on the circulating blood cells. A Doppler ultrasound helps to diagnose conditions such as blood clots, poor functioning of valves in leg veins, heart valve defects, congenital heart disease, blocked artery, decrease of blood circulation in legs, bulging arteries, narrowing of an artery for example carotid artery stenosis. Doppler ultrasound is mostly used in pregnancy, and is used to study the blood circulation in baby, uterus, and placenta. Advancement in technology of Doppler ultrasound devices and increasing awareness about improved gynecological care for pregnant women are expected to drive the growth of the market in the coming years. Rise in the untapped emerging nations is expected to offer growth opportunities for the manufacturers operating in the market during the forecast period.
