### Abstracts

The global Draught Beer market was valued at 1403.81 Million USD in 2021 and will grow with a CAGR of 2.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Draught beer, also spelt draft, is beer served from a cask or keg rather than from a bottle or can. Draught beer served from a pressurised keg is also known as keg beer. Pressurized gas could be CO<sub>2</sub>, a mixture of Co<sub>2</sub> and N<sub>2</sub>O, or air. The first two options being how most bars do it and it keeps the beer pretty fresh and carbonated until the keg is empty. The mixture of CO<sub>2</sub> and N<sub>2</sub>O keeps the beer very fresh and also keeps the beer from absorbing too much CO<sub>2</sub> and getting foamy. As a traditional type of beer, the analysts pointed out that the draught beer market performance was not satisfactory. On the one hand, draught beer's supply chain is difficult to expand due to its shortcomings. On the other hand, the price of draught beer is relatively high-end and it is not easy for the public to accept. In addition, the advantages of draught beer were slowly replaced by craft beer.
