Abstracts

The global Drug Device Combination Products market was valued at 1005.1 Million USD in 2021 and will grow with a CAGR of 5.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Drug devices facilitate early diagnosis and reduced treatment duration in a majority of surgical procedures. Growing demand is also a consequence of minimal pain, heightened cost efficiency, improved safety, better efficacy, rapid recovery, and reduced hospital stay rendered by these devices. The global drug device combination product market size is expected to reach USD 176 billion by 2024. Increasing presence of regulatory healthcare authorities enforcing clearly defined protocols for premarket authorizations is anticipated to support manufacturers in gaining approvals for their products. Recently, the U.S. FDA incorporated the lean management process mapping approach to build a more cohesive, streamlined, systematic, and collaborative system for the review of the aforementioned products. Safety guidelines and recommendations issued by these authorities are presumed to increase the adoption of these products in future and boost overall growth during the forecast period.
