A drug-eluting balloon is a non-stent technology in which the effective homogenous delivery of anti-proliferative drugs is processed by the vessel wall through an inflated balloon. This is done to restore luminal vascularity in order to treat atherosclerosis, in-stent restenosis and reduce the risk of late thrombosis without implanting a permanent foreign object. The balloon technology relies on the concept of targeted drug delivery, which helps in the rapid healing of the vessel wall and prevents the proliferation of smooth muscle cells. Drug eluting balloon is a semi-compliant angioplasty balloon, coated with anti-proliferative medicine. The medicine is ejected to the vessel walls during the inflation of the balloon. The balloons are inflated through application of nominal pressure. Global Drug Eluting Balloons?DEB? key players include B. Braun, Medtronic, Boston Scientific, BD, Yinyi, etc. Global top 5 manufacturers hold a share over 84%.
