Drug integrated polymer fibers are used to create implantable textile devices using a combination of resorbable as well as non-resorbable polymers. These devices can be made from different materials and are available in custom sizes and shapes to meet specific biological requirements. With a rise in complexity along with technological innovations, textile devices are being designed to meet a broader range of applications than earlier which will boost the demand of drug integrated polymer fibers. Textiles are being considered as the logical choice for soft tissue repair including hernias, ligaments and tendons due to its fibrous nature of human body.
