It is colourless, odourless, non-flammable, and slightly acidic. Dry ice made by liquid CO₂ to which is expanded to produce CO₂ snow and then compressing it into conveniently sized dry ice blocks and pellets. Dry ice is mainly used for food preservation, machine blast cleaning and other fields. The global key Dry Ice manufacturers include Linde, Air Liquide, etc. Geographically, APAC is the fastest-growing region, especially China, which plays a more important role in the world. Dry ice refers to a type of ice that is used as a refrigerant to keep things cold in medical and food industries and generate clouds of smoke in stage shows in entertainment industry. It is a form of solid carbon dioxide that does not leave any residue. It is called dry ice because of the process of sublimation, where upon heated it changes directly into a gas instead of melting into liquid.
