The global Dry Mortar market was valued at 3067.44 Million USD in 2021 and will grow with a CAGR of 3.3% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dry mortar is dry powder or granular material made by mixing dried screening process of fine aggregate, cementitious materials, additives, fillers, etc. Most of the dry mortar products contain both mineral cementitious binder (e.g. OPC) and polymer binder (e.g. re-dispersible powder) and they are normally packed in bags after mixing in the factory. In recent years, with the continuous improvement of the national environmental protection requirements, it has become an urgent task of the local building authorities to promote the use of dry mortar. One key factor that has been driving the demand is the ability of these products to save labor costs. With the use of specialized application equipment, substantial improvement in workmen efficiency and output has been reported due to the use of these products.
