Abstracts

The global Dry Powder Inhaler Device market was valued at 65.35 Million USD in 2021 and will grow with a CAGR of 4.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A dry powder inhaler (DPI) is a device that delivers medication to the lungs in the form of a dry powder. DPIs are commonly used to treat respiratory diseases such as asthma, bronchitis, emphysema and COPD although DPIs (such as inhalable insulin Afrezza) have also been used in the treatment of diabetes mellitus. The global total sales of dry powder inhaler device is nearly 49674 K units in 2015. As a high tech industry, the manufacturing technology of Dry Powder Inhaler Device is mature but only these international giants can supply the high-end products with excellent performance. There is still a core technical barrier. Today, the price of Dry Powder Inhaler Device is lower than past years. The reason for this downward trend of price is the development of technology and the price fluctuations of raw materials. In future, the price would go down continuously and slowly.
