## Abstracts

The global Dyes & Organic Pigments market was valued at 1044.17 Million USD in 2021 and will grow with a CAGR of .21% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dyes are intensely colored or fluorescent organic substances only, which impart color to a substrate by selective absorption of light. They are soluble and / or go through an application process which, at least temporarily, destroys any crystal structure by absorption, solution, and mechanical retention, or by ionic or covalent chemical bonds. Organic pigments are colored, black, white or fluorescent particulate organic solids which usually are insoluble in, and essentially physically and chemically unaffected by, the vehicle or substrate in which they are incorporated. They alter appearance by selective absorption and/or by scattering of light. Organic pigments are usually dispersed in vehicles or substrates for application, as for instance in the manufacture of inks, paints, plastics or other polymeric materials. Organic pigments retain a crystal or particulate structure throughout the coloration process. Rising textile production -- the textile market accounted for more than half of world dyes and organic pigments demand in 2014 -- will be the primary contributor to increased demand going forward. However, increased consumer demand will also contribute to above average growth in organic pigments demand in plastic products. Dyes and organic pigments consumption will remain concentrated in the Asia/Pacific region, where the majority of

world textiles and consumer plastic products are manufactured. China will remain the dominant consumer of dyes and organic pigments. In addition, consumer preferences for new, unusual colors that don't fade, and yet are environmentally friendly, will boost growth in value demand as textile producers increasingly turn to newer, higher value products.
