The global E. Coli Testing market was valued at 65.04 Million USD in 2021 and will grow with a CAGR of 5.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Escherichia coli (E. coli) are rod-shaped gram-negative bacteria that are commonly found in the environment, foods, and intestines of warm-blooded animals. Most of the E.coli strains are usually harmless to humans, but some strains identified to cause serious some medical complications like gastrointestinal tract infections, cholangitis, cholecystitis, bacteremia, neonatal meningitis and pneumonia, urinary tract infection (UTI), and mostly spread via contaminated food or water.Emphasis on hygiene, increasing government support for E. coli testing, rising occurrence and high morbidity of E. coli infection worldwide is expected to drive the future market growth of E. coli testing. Technological advancement together with rising use of polymerase chain reaction (PCR) tests for environment water testing predicted to open up new growth possibility during the forecast period.
